

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

Claims 1-15 (cancelled).

Claim 16 (previously amended): A method for screening a compound that inhibits or enhances activity of an acetyltransferase to catalyze a reaction that transfers an acetyl group from one substrate to another, the method comprising:

- (a) contacting the acetyltransferase with a peptide substrate in a presence of a test compound,
- (b) detecting an amount of an acetylated peptide substrate using an anti-acetylated peptide antibody, wherein an effective amount of the anti-acetylated peptide antibody recognizes with specificity only an acetylated form of the peptide substrate and does not recognize the peptide substrate in its unacetylated form,
- (c) comparing the amount of the acetylated peptide substrate detected in step (b) with a control amount defined as an amount of an acetylated peptide substrate detected in an absence of the test compound, and
- (d) selecting the compound associated with an increase or decrease in the amount of the acetylated peptide substrate as compared to the control amount.

Claim 17 (previously presented): The method of claim 16 wherein the peptide substrate is p53.

Claim 18 (previously presented): The method of claim 16 wherein the peptide substrate is labeled.

Claim 19 (previously presented): The method of claim 18 wherein the label is biotin.

Claim 20 (previously presented): The method of claim 16 wherein the peptide substrate is immobilized on a solid phase.

Claim 21 (previously presented): The method of claim 16 wherein the anti-acetylated peptide antibody is labeled.

Claim 22 (previously presented): The method of claim 16 wherein the amount of the acetylated peptide substrate is detected by ELISA.

Claims 23-24 (cancelled).
